CSTA 2027 Presentation Outline

- Presenters are required to use the template provided below that outlines their presentation.
- The outline should not include anything that would identify the presenter.
- The outline should be uploaded as a PDF
- The outline should include and match the time allotted for the proposal type: Workshop - 2.5 hours, Session - 1 hour, Mini-session - 20 minutes.
- For workshops and sessions, the outline should include learning goals, discussion questions, and activities that the presenter plans to cover in the time allotted for their presentation.
- For poster sessions, the outline should include how visitors will engage with your poster.

Proposal Title: From Data-Aware to Data-Driven: Acting on AP CS Score Reports

Learning Goals:

Participants will:

- Distinguish data-aware from data-driven instruction, using a working definition: the data identifies where to look, the teacher's experience forms a hypothesis, and new data tests it.
- Describe the three stages of the process (Notice, Investigate, Respond) and what each one produces.
- Explain why the process works: the question decides which data to examine, the weak area the report points to is a hypothesis rather than an answer, and a formative assessment tests that hypothesis during the year.
- Apply the first steps to their own context by drafting a question for their AP results and naming the slice that would answer it.
- Identify how ongoing collaboration with colleagues sustains the cycle after the session.

Proposal Type: select one of the following

□ Workshop - 2.5 hours
□ Session - 1 hour
☒ Mini-Session - 20 minutes
□ Poster - 2-hour display window

Time Allotted:	Topics Covered / Discussion Questions / Engagement Activities:
0:00–0:02	**Are You Data-Driven?** • Show of hands: "Are you data-driven?" • Define it: the data identifies where to look, the teacher's experience forms a hypothesis, and new data tests it. By this definition, many teachers are data-aware: they know their results but haven't acted on them. • Introduce the three stages: Notice, Investigate, Respond.

0:02–0:06	**Notice: Look, Then Ask.** • Look: the Subject Score Roster shows the score distribution, mean, and percentage of scores 3 or higher, by section and against state and global peers. • Ask: turn what you see into a question, such as "How do I get more students to pass?" or "How could my period 4 students earn a 5?" • Engagement (Think-Pair-Share): "Think about the results you just received, or last year's. What question would you want them to answer?" • Whole-room question: "Why start with a question instead of opening the detailed report?"
0:06–0:12	**Investigate: Slice, Combine, Hypothesize.** • Slice: filter the Instructional Planning Report by score band and/or section to match the question, then download it. For example, look at the 2s, since 3 is passing. • Combine: the report separates results by test form. A free, privacy-focused browser tool combines the forms into two tables, units and practices, without uploading any data. • Hypothesize: where the weakest unit and practice meet on the Data Deep Dive matrix is a hypothesis, not an answer. Prefer earlier units, since later units build on them. Test the hypothesis against colleagues' experience: evidence first, then how each person taught it. • College Board also recommends comparing two slices (such as 2s against 3s and above) as a next step to try on your own. • Engagement (Think-Pair-Share): "Which slice would answer your question: which score band, which section?" • Whole-room question: "The report shows content and skills separately. Why treat the place where they meet as a hypothesis rather than an answer?"
0:12–0:18	**Respond: Plan, Test, Adjust.** • Plan: write an action plan for the hypothesis, fitted to your adopted curriculum. • Test: build an AP Classroom formative assessment by filtering the question bank by learning objective, skill, or content area. Give it before and/or after the change. Its purpose is to test the hypothesis, not to serve as a grade. • Adjust: when results come back, reteach or spiral, and carry the results into future planning. An assessment is formative only when its results change what you teach. • Engagement (Think-Pair-Share): "What's one thing in your curriculum you'd change, and when in the year would you check on it?" • Whole-room question: "Why give a formative assessment instead of waiting for next year's scores?"

0:18–0:20	**Close: Where You Go From Here.** • Reflection: "By our definition, were you data-driven? What would it take to be?" • The cycle works best with colleagues who revisit the plan and the results through the year, in a PLC, a community of practice, a CSTA chapter, or an online group. If your partner's question was close to yours, trade contact information. • Point to the take-home resources.
