CSTA 2027 Presentation Outline

- Presenters are required to use the template provided below that outlines their presentation.
- The outline should not include anything that would identify the presenter.
- The outline should be uploaded as a PDF
- The outline should include and match the time allotted for the proposal type: Workshop - 2.5 hours, Session - 1 hour, Mini-session - 20 minutes.
- For workshops and sessions, the outline should include learning goals, discussion questions, and activities that the presenter plans to cover in the time allotted for their presentation.
- For poster sessions, the outline should include how visitors will engage with your poster.

Proposal Title: Acting on AP CS Score Reports: A Hands-On Data-Driven Cycle

Learning Goals:

Participants will:

- Distinguish data-aware from data-driven instruction, using a working definition: the data identifies where to look, the teacher's experience forms a hypothesis, and new data tests it.
- Form a question from their own Subject Score Roster, or a partner's, and confirm together that the report can answer it.
- Slice and download an Instructional Planning Report to match the question, and combine its test forms with a browser tool.
- Form a hypothesis with colleagues who share a weak skill or an area of interest, stating the evidence before interpreting it and prioritizing earlier units.
- Write an action plan for their top hypothesis, fitted to their adopted curriculum.
- Build and schedule an AP Classroom formative assessment that tests the hypothesis during the year.

Proposal Type: select one of the following

□ Workshop - 2.5 hours
☒ Session - 1 hour
□ Mini-Session - 20 minutes
□ Poster - 2-hour display window

Time Allotted:	Topics Covered / Discussion Questions / Engagement Activities:
0:00–0:03	**Log In and Start.** • Everyone opens a laptop and logs in to the College Board score reporting site while the presenter talks. Participants without access find a partner who has it. • The hour's promise: "By the end of this session you will have been data-driven with your own results." Data-driven means the data identifies where to look, your experience forms a hypothesis, and new data tests it. • Introduce the three stages (Notice, Investigate, Respond).
0:03–0:05	**Notice: Look.** • Open the Subject Score Roster: score distribution, mean, and percentage of scores 3 or higher, by section and against state and global peers.
0:05–0:10	**Notice: Ask.** • Write a question the data could answer, such as "How do I get more students to pass?" or "How could my period 4 students earn a 5?" Sample questions and anti-questions on the handout help. • Engagement: partners check that each question can be answered by slicing the report. Latecomers join a pair here and shadow their partner through the data steps. • Discussion: Why start with a question instead of opening the detailed report?
0:10–0:18	**Investigate: Slice and Download.** • Filter the Instructional Planning Report by score band and/or section to match the question (for example, only the 2s, since 3 is passing), then download it. One download contains every test form. • Engagement: partners confirm that the downloaded slice matches the question, and help each other with problems in the portal.
0:18–0:23	**Investigate: Combine.** • Load the report into a free, privacy-focused browser tool. It combines the test forms into two tables, units and practices, compared with global performance; reports never leave the laptop. The combined view is an approximation, good enough to decide where to look. • Find the weakest unit and practice, and locate where they meet on the CSA or CSP Data Deep Dive matrix. Prefer earlier units, since later units build on them. • College Board also recommends comparing two slices (such as 2s against 3s and above) as a next step to try on your own.
0:23–0:26	**Sort Into Skill Groups.** • Signs mark each course's practices. Participants go to their weakest practice. Crowded groups split into groups of three or four; anyone alone joins their second-weakest practice. Participants without data choose a group by interest.

Time Allotted:	Topics Covered / Discussion Questions / Engagement Activities:
0:26–0:38	**Investigate: Hypothesize Together.** • Each person's top selection in turn: first state what the data shows (the group asks clarifying questions only), then interpret it together: how I taught it, what worked, how other curricula teach it. The group names a hypothesis, and the teacher decides whether to keep it. • Engagement: each group member leads the discussion of their own selection. • Discussion: The report shows content and skills separately. Why treat the place where they meet as a hypothesis rather than an answer?
0:38–0:44	**Respond: Plan.** • Complete the worksheet's action plan for your top hypothesis, fitted to your adopted curriculum. The group gives feedback on each plan. • Discussion: What will you change in your teaching, and why do you expect it to help?
0:44–0:56	**Respond: Test.** • Build an AP Classroom formative assessment by filtering the question bank by learning objective, skill, or content area. Group members share searches for their common skill; each builds for their own content focus. • Schedule it before and/or after the change, and decide what result would mean reteaching. Its purpose is to test the hypothesis, not to serve as a grade. Participants without data draft an assessment for the group's hypothesis. • Discussion: Why give a formative assessment instead of waiting for next year's scores?
0:56–1:00	**Close: Where You Go From Here.** • Adjust happens after today: when results come back, reteach or spiral, and carry the results into future planning. An assessment is formative only when its results change what you teach. • Groups trade contact information if they'd like to compare results later. The cycle works best with ongoing collaboration in a PLC, community of practice, CSTA chapter, or online group. • Point to the take-home resources. Reflection: "By our definition, are you data-driven now?"
